InfiniStreamNG 9800 Appliances

**InfiniStreamNG Platform Overview**

The InfiniStreamNG™ platform represents the next evolution of NETSCOUT’s high capacity and flexible appliances that leverage Adaptive Service Intelligence™ (ASI) technology to perform deep packet capture and analysis of services, service enablers and network performance. Offering unsurpassed scalability, InfiniStreamNG probes are integrated with the nGeniusONE® Service Assurance platform to provide a common set of packet-flow-based metadata for use in troubleshooting, service and application performance, detailed key performance indicators, as well as real-time and historical forensic analysis. NETSCOUT® offers multiple InfiniStreamNG models (appliance, COTS-based software and virtual appliances) to support the different processing and storage needs of enterprise and service provider environments including business services, mobile, fixed-line voice, residential triple-play, satellite and cable/MSO networks.

**InfiniStreamNG 9800 Overview**

InfiniStreamNG 9800 appliances are ideal for high capacity 10 Gigabit, 40 Gigabit and 100 Gigabit monitoring in data centers, high-volume aggregation links and service provider environments that require vast storage for long-term, historical forensic analysis. With an impressive storage capacity that begins at 96TB, InfiniStreamNG 9800 probes can be extended all the way to 288TB per appliance using up to 2-96TB Extended Storage Units (ESU).

**Deployment**

Strategically deployed throughout the network, InfiniStreamNG 9800 appliances provide superior processing power, packet capture and data storage appropriate for high-volume traffic found in the core of large enterprises and data centers. InfiniStreamNG 9800 appliances present real-time views of end-to-end call trace data and network-wide KPI visibility, to protect the reliability and availability of networks and services.

nGeniusONE Platform

The nGeniusONE Service Assurance platform provides insights into the performance characteristics of data, voice and video service delivery to manage the availability and quality of the user’s experience. nGeniusONE helps dramatically shorten the time required to solve network and application performance issues by providing a common set of metadata for service visibility across network elements, applications and devices to address the needs of network and IT operations teams.

ASI Technology

NETSCOUT’s patented, ASI technology is a next generation Deep Packet Inspection (DPI) engine that intelligently and efficiently analyzes packet and flow data to provide real-time, contextual analysis of service, network and application performance. ASI provides an unparalleled wealth of information and uses sophisticated algorithms that determine the best way to process, store and retrieve data, guaranteeing that InfiniStreamNG probes make the most efficient use of compute and storage resources.
