

Launch VoLTE Services with Confidence

THE OPPORTUNITY

A tier one operator is about to rollout VoLTE services nationwide. The operator is concerned that:

- The network and engineering teams are not ready for anticipated traffic volumes.
- Quality of VoLTE services provided will be harder to track on a national scale.
- Any negative publicity will slow uptake of VoLTE services and erode brand equity.
- Latent performance issues could result in project delays or require rollback

How can this operator minimize the risk when launching VoLTE services?

THE DETAILS

With expectations for VoLTE call quality riding high, the operator must find a way to keep on top of voice service performance. Five critical KPIs can provide the necessary guidance and ensure that subscribers have a positive experience with VoLTE from Day 1.

Accurate calculation of these metrics with ongoing comparison of performance between regions can help set and maintain performance benchmarks as new subscribers come online with VoLTE-enabled devices.

Ultimately, a problem free, quality voice experience will accelerate uptake and continued use of VoLTE services.

THE RESULTS

NETSCOUT'S VoLTE solution

- Offers executive reporting options that summarize VoLTE service performance across regions.
- Delivers more accurate insights with intelligently calculated KPIs for a true reflection of service degradation.
- Reduces calls to customer care through proactive alarms and ongoing monitoring of the elements, domains and devices involved.

Our experience with early VoLTE deployments enables swift implementation of field-proven best practices and more relevant KPI calculations.
