

Global Financial Services Leader Maximizes Security on VPNs Used by Employees As They Work-From-Home Due to Global Pandemic

The Situation

This global financial services leader provides insurance and asset management to 100 million clients in over 50 countries worldwide thanks to the dedicated efforts of over 150,000 employees. It is no surprise that a financial services company of this size would take security protection seriously. Their investments in both Arbor Cloud™ and Arbor Edge Defense (AED) make them one of the largest enterprise deployments of Arbor solutions. They are protecting their inbound traffic and in-house applications for employees working from home through VPNs, into their data centers in 20 locations with AED technology. The AED devices protect locally until the Internet bandwidth is consumed and then automatically signal Arbor Cloud for cloud-based DDoS attack mitigation.

The Details

As the Coronavirus began appearing in Europe, the security team using Arbor Solutions at the financial organization, took action sooner than many other companies. They proactively made it a priority to ensure that employee VPN for internet access would be protected. They worked closely with the NETSCOUT® team in France to identify four European locations where they took advantage of the AED-embedded software licensing technology to easily upgrade their AED licenses from 5G to 10G.

The Results

The increased DDoS management and mitigation capacity provides the organization and their employees confidence that they will be protected from DDoS attacks that can disrupt their business activity and even damage the organization's reputation while temporarily working from home. The organization was satisfied with the flexibility of the AED license configuration and the ability of NETSCOUT to execute on a global procurement effort quickly and to the organization's crisis timeline.

CUSTOMERS REQUIRE FLEXIBLE LICENSING AND RAPID REACTION TIME

TO SCALE AND MEET CRISIS NETWORK TRAFFIC AND SECURITY NEEDS

Due to NETSCOUT's flexibility in licensing, global presence and ability to react swiftly, the customer was able to meet their crisis goals quickly and efficiently.

Intelligently Automated, Best Practice Hybrid DDoS Protection, Backed by Global Visibility and Threat Intelligence

The facts are clear – DDoS attacks continue to rise in size, frequency and complexity. Modern-day DDoS attacks are a dynamic combination of:

1. Volumetric
2. TCP State Exhaustion
3. Application-layer attack vectors

Industry-best practice for DDoS defense is a multi-layer, or hybrid approach that takes into account the different types and targets of DDoS attacks. Just as important, the solution must have an intelligent form of communication between these two layers backed by up-to-date threat intelligence to stop dynamic, multi-vector DDoS attacks.

In-Cloud Protection

Arbor Cloud™ is an ISP agnostic, in-cloud, fully managed DDoS Protection service. Employing 14 scrubbing centers located throughout the US, Europe and Asia, Arbor Cloud provides over 11 Tbps of global mitigation capacity. Enterprises can seamlessly integrate their on-premise Arbor Edge Defense (AED) protection with Arbor Cloud to obtain comprehensive DDoS attack protection. Service Providers can also use Arbor Cloud for extra mitigation capacity and expertise.

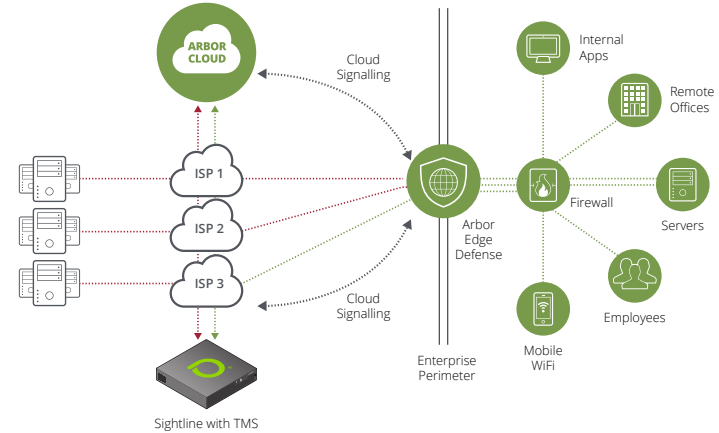

On-Premise Protection

For larger networks and more experienced DDoS attack mitigation teams, Arbor Sightline and Arbor Threat Mitigation System (TMS) provide pervasive network visibility and DDoS attack detection. Upon attack detection, Arbor Sightline can automatically re-route attack traffic to the Arbor TMS for surgical mitigation of all types of DDoS attacks. For smaller networks, Arbor Edge Defense (AED) is an always-on, in-line, DDoS attack detection and mitigation solution which can stop inbound DDoS attacks. For larger DDoS attacks, AED's Cloud Signaling™ will intelligently link to Arbor Cloud.

Global Visibility and Threat Intelligence

Arbor Security Engineering & Response Team (ASERT) leverages a 20-year, worldwide deployment of Arbor products and third-party intelligence – otherwise known as ATLAS® – to gain unmatched visibility into global threat activity. The global insight derived from ATLAS/ASERT continuously arms all Arbor products and services in the form of features, integrated workflows and the ATLAS Intelligence Feed (AIF).

Arbor Products	
Arbor Cloud DDoS Protection Products and Services	<ul style="list-style-type: none"> • A fully managed, tightly integrated combination of in-cloud and on-premise DDoS protection. • 24/7 managed DDoS protection with 14 scrubbing centers around the world providing over 11 Tbps of mitigation capacity.
NETSCOUT Arbor Edge Defense	<ul style="list-style-type: none"> • Always-on, in-line, detection and mitigation of DDoS attacks ranging from sub 100 Mbps to 40 Gbps. • Can stop inbound and outbound DDoS attacks, malware, and C2 communication.
Arbor Sightline & Threat Mitigation System (TMS)	<ul style="list-style-type: none"> • Arbor Sightline provides pervasive network visibility and DDoS attack detection. • Arbor TMS provides out-of-path, stateless, surgical mitigation at up to 400 Gbps per 2U device.
Arbor Sightline with Sentinel	<ul style="list-style-type: none"> • Intelligently optimize mitigation based on infrastructure capability to block attacks in the most efficient and scalable way. • Share attack data and request mitigation help from other networks. • Detailed reporting to see exactly what is being dropped, where, and why.
