

Defend Against Opportunistic Hackers

The Opportunity

As COVID-19 continues to drive a transition of business, entertainment and education toward a digital model, cyber criminals are finding new ways to take advantage of the network. Carrier service providers must stay vigilant to protect their resources and their customers from changing threats.

Facing increased outside security threats, carrier service providers need to protect customer sites with rapid application level visibility.

For inside security threats, carrier service providers have additional requirements.

- Detect when and where exfiltration of sensitive assets is occurring.
- Block communications to command and control servers.
- Thwart ransomware / malware attacks even when actions are encrypted.

The Details

Using Arbor Sightline and Arbor Edge Defense (AED), service providers can fortify their operational defense strategies.

- Gain advanced threat visibility from any location.
- Monitor threats in real time or compare historical trends over time.
- Report on Indicators of Compromise (IoC).
- Effectively block dynamic command and control threats.

The Results

With NETSCOUT® DDoS and security solutions, carrier service providers can protect the network and their customers.

- Ensure delivery of clean data to end users.
- Protect the availability of critical servers and infrastructure.
- Maintain/increase customer loyalty / Net Promoter Score (NPS).

Our Promise

At NETSCOUT we view our customer relationships as long-term partnerships. We are here to help in this rapidly changing environment. Learn more at:
