NETSCOUT Certified InfiniStreamNG Software Appliance

Smart Visibility for Service Assurance, Cybersecurity, and NETSCOUT Smart Edge Monitoring

NETSCOUT InfiniStreamNG® (ISNG) software and hardware appliances use our patented Adaptive Service Intelligence™ (ASI) technology to generate the NETSCOUT “Smart Data” required for continuous and uniform visibility across today’s large-scale network environments. Our nGeniusONE® Service Assurance platform’s smart analytics consume this smart data to supply information technology (IT) teams and service providers with views, alerts, and reports on key performance indicators, network and application error details, specialized service monitors, session records, and packet decodes.

In addressing monitoring needs in very large environments, multiple ISNG software and hardware appliances can be installed to provide virtually unlimited scalability. ISNG appliances can be deployed alongside our vSTREAM™ virtual appliances to expand visibility into both multi-cloud (e.g., Amazon Web Services, Google Cloud, Microsoft Azure, Oracle Cloud Infrastructure) and virtual (e.g., VMware NSX-V and NSX-T) environments.

NETSCOUT Certified InfiniStreamNG Software Appliance Overview

The NETSCOUT Certified Software Appliance solution factors deployment of a customer-provided hardware platform certified to support ISNG software.

Since network speeds, processing, and capacity needs vary, NETSCOUT offers several ISNG Certified Software Appliance models with different interface and storage capacities. Various ISNG models can be deployed in tandem for seamless analysis across the entire network, making it easier and more cost-effective to monitor and gather intelligence from multiple sources, with no disruption to business processes. Equally significant, NETSCOUT offers ISNG Certified ISNG Software Appliance models designed for deployment in any environment, ranging from the network edge, small remote facilities, satellite offices, and disaster recovery locations, onto the data center core.

NETSCOUT Certified Software Appliances offer 100% performance parity with NETSCOUT’s purpose-built ISNG hardware appliances. Additionally, NETSCOUT provides our award-winning MasterCare annual support coverage for the Certified ISNG software and Network Interface Card (NIC) kit, as well as the Certified InfiniStreamNG Server, resulting in single-source system support for enterprise and service provider customers. Additionally, ISNG Certified Software Appliances configured with the NETSCOUT Cloud Adaptor module provide service visibility in our Smart Edge Monitoring solution.
Certified InfiniStreamNG Software

The Certified InfiniStreamNG Software component of Certified ISNG Software Appliances is unbundled from the underlying Certified ISNG Server. This configuration provides customers the flexibility of a software-based approach with the performance and reliability of traditional ISNG hardware appliances. The Certified ISNG Software component, which includes the ASI NIC, is ordered directly from NETSCOUT.

Certified InfiniStreamNG Server

The Certified ISNG Software Appliances differ from the traditional InfiniStreamNG hardware appliances, in that the server hardware is unbundled from the Software and ASI NIC. The Certified ISNG Servers are offered in a variety of hardware configurations to meet a broad range of performance and storage requirements. With guidance from NETSCOUT, customers independently order these servers from a NETSCOUT Certified Supplier.
